their presence by striking the withies. My friend the late Mr. L. F. Hamer, who took the photograph reproduced in Plate XXII(*a*), about sunrise, reckoned that quite a hundred fish are caught from a dam in a single night. The dams are lowered as the water falls.

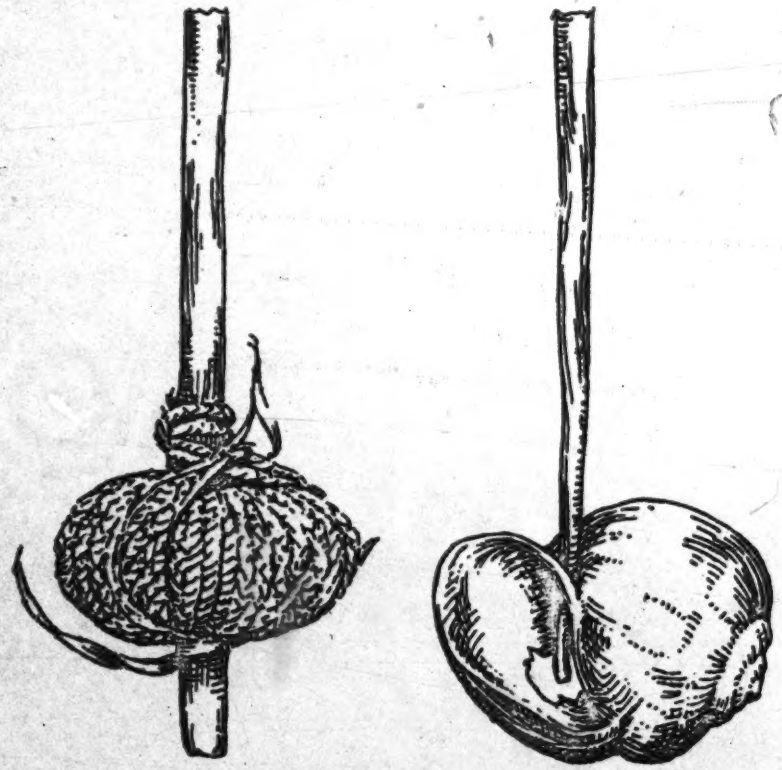

FIG. 10. Instruments for attracting fish.

As the dry season advances a great number of fish are imprisoned in lakes and lagoons from which there is no outlet, and as these dry up they are confined to a smaller and smaller expanse of water and are killed by individual fishers using barbed spears and long harpoons (Plates X and XXII (*b*)), and, at the end of the season, by battues in which gaffs and basket traps may also be employed. Fishing is fairly consistently productive throughout the drought, its yield increasing somewhat in the battue period and rising to a second peak at the

commencement of the rains, in April and May, when the rivers begin to rise again and bring the fish into the shallows where they are easily speared among the reeds and weeds. There is very little fishing—by spear in occasional lagoons—after the Nuer have returned to their villages, for these are mainly inland, away from open water, and the streams are too deep and too infested with crocodiles to encourage fishing. Also, the fish are widely distributed by flood water and protected by rank marsh vegetation. Those Nuer whose villages are on the banks of large rivers sometimes fish from dug-out canoes (Plate IX) with long harpoons, but the Nuer possess very few good canoes —and these they have exchanged or stolen from the Anuak— for they have neither the wood nor the skill to make more than crudely burnt-out vessels of palm and sycamore.

Nuer are fine spearsmen but, otherwise, not very ingenious fishermen. Except for occasional fish spitted with amazing rapidity from the bows of canoes by harpoons and spears as they jump or rise to the surface, Nuer never see their prey, but either hurl their spears at random into likely spots amid weeds and reeds or set up grasses and withies to indicate the presence of fish. A myth recounts that once upon a time all fish were visible to the human eye but that God later made them invisible in the water. The chief Nuer weapon is the barbed spear, though the harpoon is considerably used. When fishing in shallows with spears they sometimes strike the water with a ball of twine or the shell of a giant snail attached to a stick (Fig. 10) to attract the fish. Fish are eaten roasted or boiled.

## VI

Nuerland is also very rich in game, though Nuer do not exploit this source of food extensively. There are vast herds of tiang and cob; other antelopes are plentiful; and buffalo, elephant, and hippopotami abound. Nuer eat all animals except carnivora, monkeys, some of the smaller rodents, and zebra, and they kill the last for its skin and tail in the south of Lou country, where it roams in the dry season. Lions abound, especially to the west of the Nile, and are a serious menace to the herds, but Nuer only kill them and leopards, the skins of which are worn by chiefs, if they attack cattle in kraals or grazing grounds, as
